

Benchmark Problem Landscapes: Quadratic (A), Near-Quadratic (B), Ill-Conditioned (C)

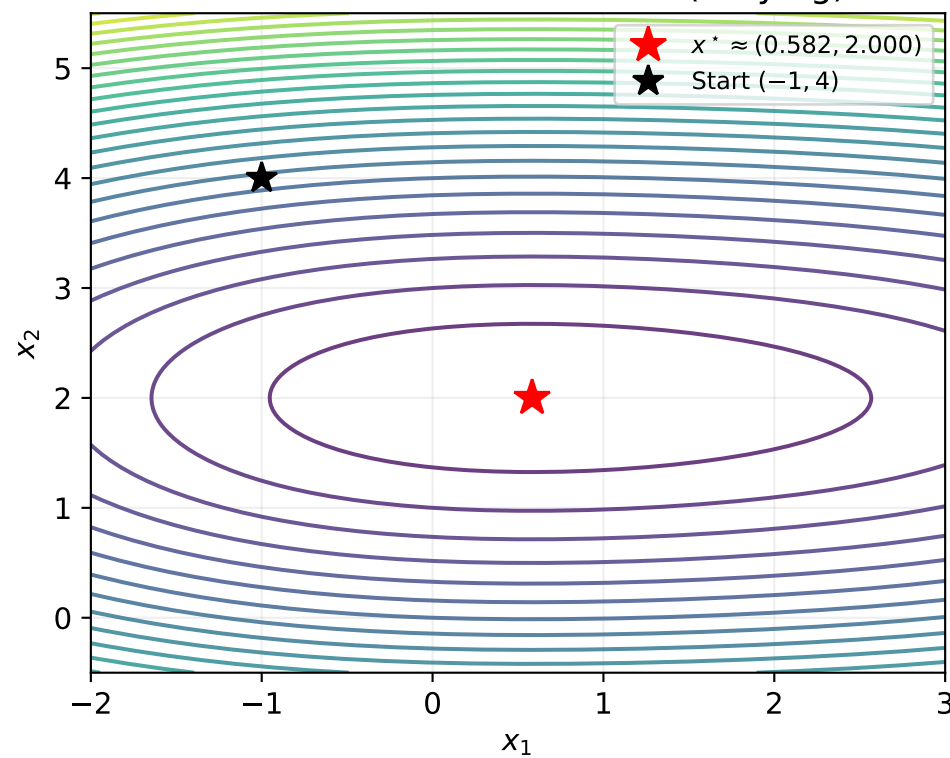

Benchmark A: Quadratic Landscape

$\kappa = L/\mu = 1.1$, $L = 1.033$, $\mu = 0.925$

Benchmark B: Sinusoidal Perturbation

Condition number $\kappa \approx 3$ --10 (varying)

Benchmark C: Rosenbrock

$\kappa \approx 2000$ at optimum
