

Interior optimum: convergence comparison

$$f(x) = (x_1 - 1)^2 + (x_2 - 5)^2$$

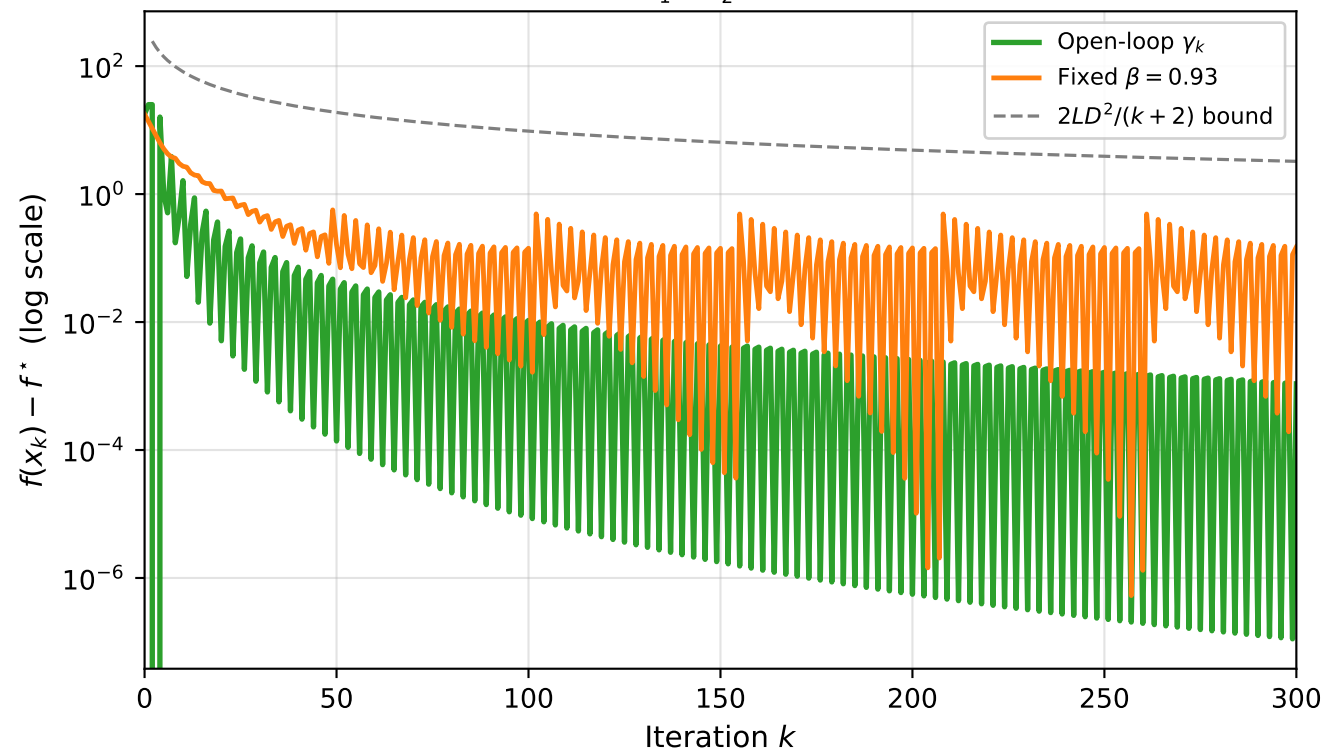

Interior optimum: gap comparison

(open-loop vs fixed β)

Boundary optimum: convergence comparison

$$f(x) = x_1^2 + x_2^2, f^* = 0.25$$

Step size (retain fraction) comparison

$$\beta_k = 1 - \gamma_k$$
